

## How to use Embed Code in studentcentral.

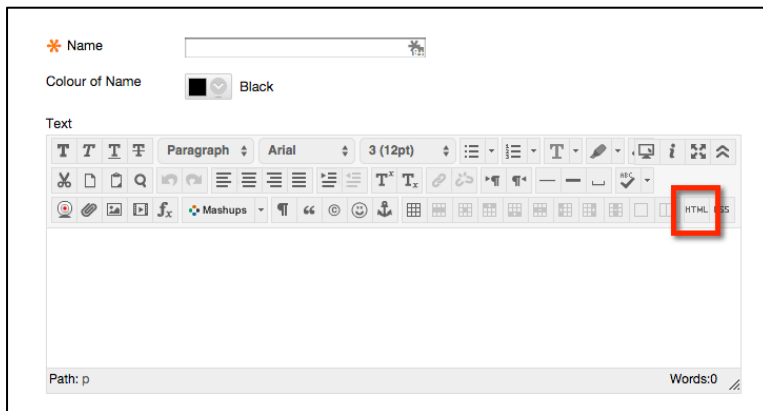

Where a social media site provides Embed Code, usually for media (video, image sound and presentations), you can use this to make the content appear within studentcentral.

1. **Find the Embed Code** for the content you want to use.  
(The example shown below is for a video in YouTube. Look for a Share or Embed link on the site you are using, e.g. Vimeo, Slideshare, Prezi, Flickr.)

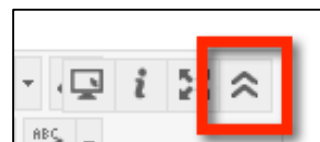

2. **Highlight and Copy the Embed Code.**

You can add embed code in studentcentral wherever there is a **Text** box with a text editor (e.g. an Item, Blog or Journal entry, Wiki page).

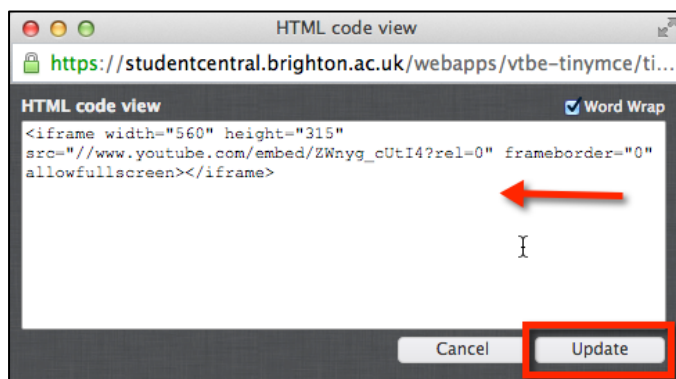

3. Go to your area on **studentcentral** and select the content option you need.
4. In the **Text editor**, click the  **HTML** icon. This allows you to enter code.

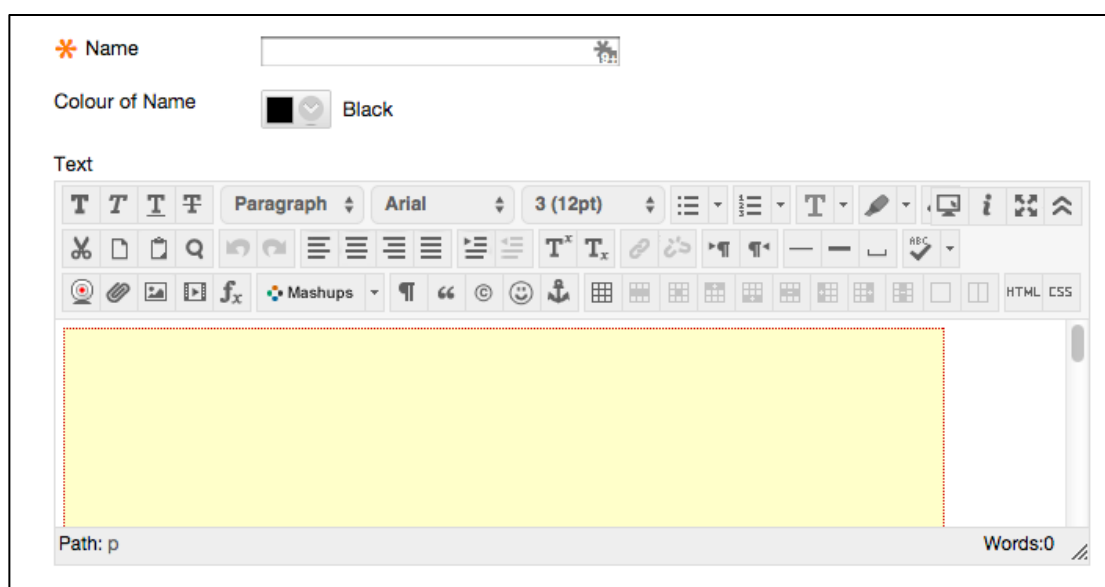

**Note:** if you don't see the full text editor, click the  **Show More / Less** icon to reveal the full menu.

5. A new 'HTML code view' window will open. Paste the embed code into the box and click **Update**.

6. A yellow box with a red dotted border will appear in the Text box indicating the location of the embedded content. You can add text around the embedded content.

7. Click **Submit**.

The embedded content appears on the screen within studentcentral.
