

Making a spear-thrower

1. You will need:

- Two sticks
- Two stones
- Some string

2. Tie one of the stones about a hands width away from one end of one of the sticks.

3. Tie the other stone at the other end of the stick.

4. Balance the other stick on top, so that it rests on the central stone and touches the back stone, which will push it forward when you flick the spear-thrower forward.

When you use this, make sure there is a large range of about 20 metres in front of you with no-one in it.
