

## Adding the Photo Register Widget to your Studentcentral module

We have noted that some 2018 modules have been triggered without the photoregister widget on the dashboard page, and trying to add this to the dashboard results in an error.

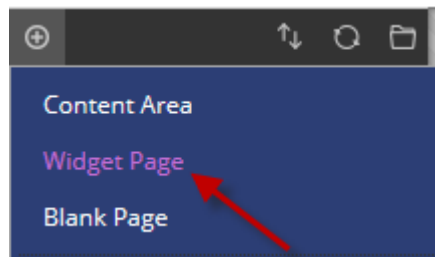

This quick guide shows you how to work around this.

### Step 1: Create a hidden widget page

- a) Go to your module area on Studentcentral

- b) Click on the + icon above the module menu

- c) Click 'Widget Page' in the menu that appears

- d) Give it the page a name – e.g. 'photoregister'. Leave 'available to users' unticked – this will prevent students seeing this widget page

**Add Widget Page**

\* Name:

Available to Users

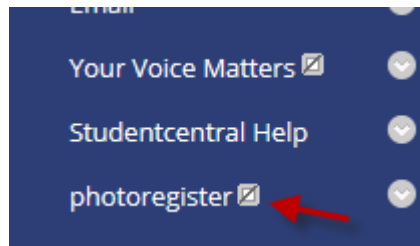

Cancel Submit

- e) Click **Submit** to save

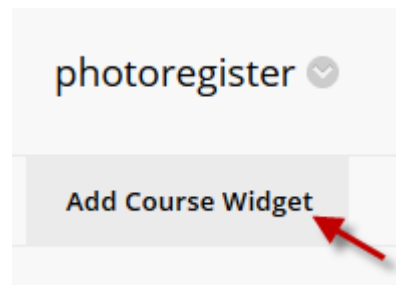

*Note: students cannot see the photoregister widget, and so even if you did make this widget page available they would see a blank page*

## Step 2: Add the Photoregister widget to your new widget page

- a) Click on the new photoregister widget page you just created

- b) Click Add Course Widget

- c) Scroll down the alphabetical list and find 'Photoregister'. Click **Add**

### Photoregister

Photoregister  
(More)...

Add

- d) Scroll to the bottom of the page and click OK. You will now return to the photoregister page and should see the photoregister widget ready for use!
