

New Look Moodle

Top 5 Improvements in Moodle 3.4 coming on 25 July 2018

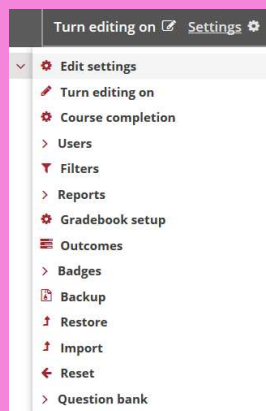

1

Streamlined module search

We've transformed the My Moodle page. Different mechanisms to help you find a module are streamlined with our new **Find a Module** functionality.

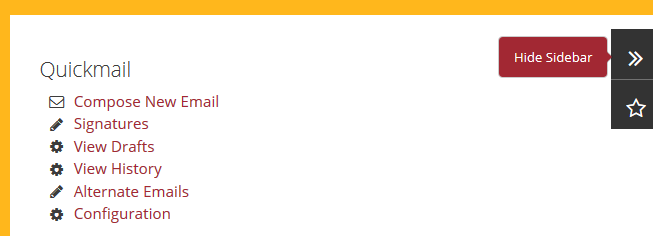

3

New Settings menu

The **Settings** menu is persistent (you won't have to click to keep the second layer menu open) to enable easy navigation back and forwards through the menu.

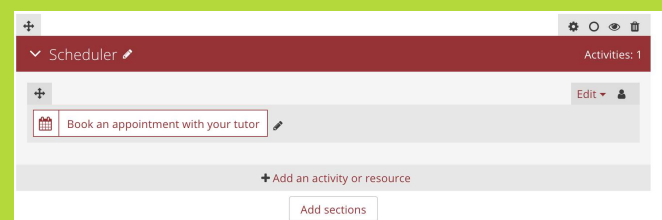

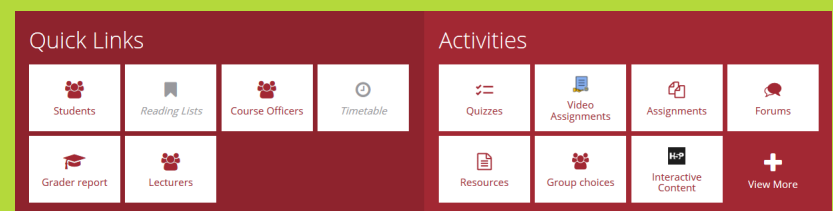

5

Hide Sidebar

You can choose to hide blocks on the right column to prioritise content while working on your module using the **Hide** and **Show Sidebar**.

2

Dashboard & Collapsed Topics

The **Module Dashboard** has been redesigned to improve contrast and accessibility and to make it easier to use. You can now change the order of activities to prioritise activities for your students.

We've kept **Collapsed Topics** to provide an overview of module content to students. Topics have improved contrast and easy to use editing features.

4

Add to Favourites

Favourite within a module

Do you need to visit a module regularly? You can **Favourite** any module while reviewing it.
